

## คู่มือการ Set SDVR ผ่าน Blackberry

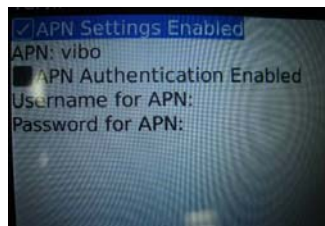

It was nice to talk to you on the phone, please see below for more detail information of Blackberry.

Regarding Blackberry issue, please confirm the setting as below.

1. Go to options -> advance options -> TCP/IP.

2. You must enable "APN Settings Enabled" and input username and password if necessary,
3. Please contact with your blackberry network provider to make sure they support blackberry for internet connection, and also ask them for APN settings, otherwise you may only connect to Blackberry internal network.

4. Then go back to H264 AP and type DVR IP and login information again, we suggest you to use our demo site for testing.

IP: 124.219.25.10

Port: 411

Username: admin

Password: 411411

5. Please make sure you see the arrow in the red square as picture below, that means you are connecting to internet, if you didn't see this symbol, you are still in Blackberry internal network.

6. If you are able to connect to internet, then you should be able to see the image of DVR.

Therefore, please contact with your Blackberry to make sure whether you can connect to the internet, not just Blackberry internal network, and also confirm the APN settings.

Once you have correct APN settings, please try both versions of Blackberry software we sent to you before and let us know the result.
